

Project : Nummus Payment Gateway
Subject : Wordpress Woocommerce Plugin
Date : April 2020
Version : 1.0

If you have a wordpress website (woocommere) you can easily add the Nummus payment gateway as payment method.

Download plugin & validate-order script from: <https://smarttest.online>

Add it to your wordpress installation like any other plugin & activate it.

On plugin setup you will need to enter an activation code.

The activation code is the email adress you are registered with and the API key you received with the API credentials in the email. **(email api_key , place a space between email and api_key)**

To get the API credentials, login to your Nummus account, activate the WEB-API by navigating to BILLING, scroll down to Web API, select a **API Bundle** and click Activate.

Go back to SETTINGS and under “Configure Webshop Details” section there is a button visible now **Send Email**. Click the button to get the API credentials.

Validate-order Script

Place this script in the root folder of your wordpress installation.

In the gateway config specify the location of this script as the returnUrl (see config-screenshot).

Edit this script and place your order-received or thank-you page url here.

How to get order-received / thank you page info ?

1. In the woocommerce settings enable “Check payments” as payment method.
2. Go to the webshop and do a purchase.
3. At the end of the process you will be redirected to a Order-received page.
4. Copy this url from your browser address-bar and place it into the validate-order script.
5. Adjust the parameters accordingly & modify the theme if needed.
6. Once this is done you can remove the “Check payments” method.

See config screenshots on the next page.
